

Super 44 6-Diode Stop/Turn/Tail

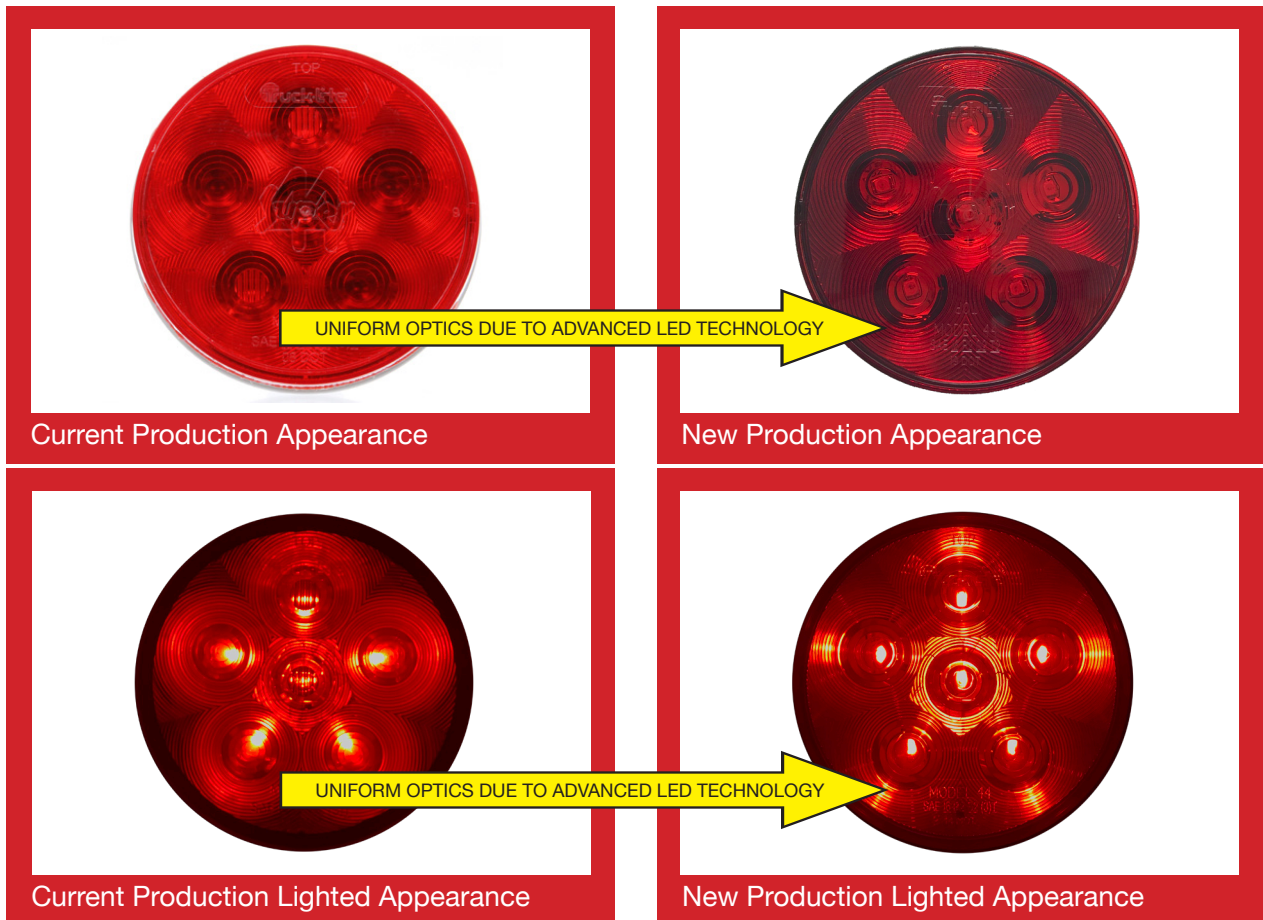

Appearance Change

Effective: November 2019 – June 2020

Starting in November 2019 and continuing through June 2020, **all associated part numbers of the Super 44 6-diode Stop/Turn/Tail product family** will undergo an appearance change. Truck-Lite has enhanced its LED technology to provide optimum performance through **lower current draw, slimmer profile and uniform optics**. Lamp common size, function, mounting options and part numbers will stay the same.

NOTE:

- All lamps will have the same six-diode pentastar pattern with improved optics
- New design uses less encapsulant than previous version, resulting in both an environmental improvement and a weight reduction of more than a half-pound from a trailer's overall weight with four lamps installed
- All grommet-mount housings will change from white to black
- All gray flange versions will appear slightly different than previous production models; black and white flange plastics will not be affected
- All lamps come with the same warranty and strict adherence to Truck-Lite safety and quality standards as previous production models
