Air Springs for Tractor, Trailer and Truck Air Suspensions

All types and sizes of rolling lobe, convoluted bellows or sleeve type replacement air springs to service all the major manufacturers of suspensions and ride equipment. Gold Line Quality Parts™ brand air springs are specifically designed to meet the customers' needs in terms of carrying capacity, spring characteristics, spring deflection and space requirements. Made of high quality rubber compound that has been developed, tested and proven to provide years of performance. The excellent dynamic behavior of elastomer materials combined with high performance plastic and metal components result in a trouble free air spring system.

- Available in 1/2" increments to satisfy all ride height requirements regardless of the OE manufacturer.
- Bellows made to OE construction which allows for minimal heat retention and longer life of product.
- Provided with an industry leading 2 year warranty.

Gold Line Quality Parts™ Rolling Lobe Air Spring

Rolling lobe type air springs consist of the rubber bellows, bead plate, piston, and an optional internal bumper. Rolling lobe air springs provide the maximum ride comfort and therefore are the most popular air spring designs for commercial vehicle suspensions.

Gold Line Quality Parts™ Convoluted Air Spring

Convoluted type air springs consist of the rubber bellows, top and bottom bead plate, and an optional internal bumper. Convoluted air springs are used in both vehicular suspensions and Industrial applications. In industrial applications, they are used as air actuators or vibration isolators.

Gold Line Quality Parts™ Sleeve Type Air Spring

Sleeve type air springs consist of the rubber sleeve bellows, cap, piston, and an optional internal bumper. Sleeve type air springs provide the maximum ride comfort for cabin and driver seat suspensions as air actuators or vibration isolators.

General Information

Warning

- Do not inflate the air spring unless it is properly secured in an appropriate structure.
- Operate the air spring only in the vehicle's suspension system or a suitable device.
- Do not allow the pressure to exceed 100 psi / 7 bar. Otherwise there is a risk of injury!
- Maintain a service temperature of max -40 °C (-44 °F) to 70 °C (154 °F)

Preventive Maintenance

- Check clearance of complete circumference of the air spring to avoid contact between bellow and other vehicle parts.
- Check the torque on mounting fittings – do not over torque (see warning label on top of air spring for torque recommendations)
- Maintain components of the pneumatic system, such as valves, regulators and lines clean and in good condition.
- Make sure appropriate shock absorbers are installed and in good condition. The shock absorber will limit the maximum rebound of an air spring and keep it from overextending.
- Keep the air springs clean (to wash use soap and water)
- Do not apply any material with a mineral, hydraulic or lubricant based oil, organic solvents, abrasives or open flames.

Storage

Air springs should be kept in dark, dry storage at normal room temperature.

Failure Causes and Prevention

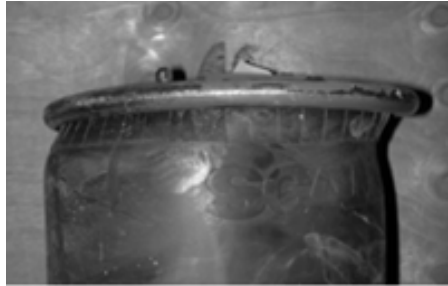

OVERTORQUE

Cause of Failure:

Fittings can break or threads be damaged caused by over-torque. (Note: grease or lubrication on the threads can affect the torque and may cause damages) Air spring system can be twisted.

Recommendation:

Apply general installation instructions. Review drawing or product warning label for proper assembly torque. Do not use an air wrench for installation.

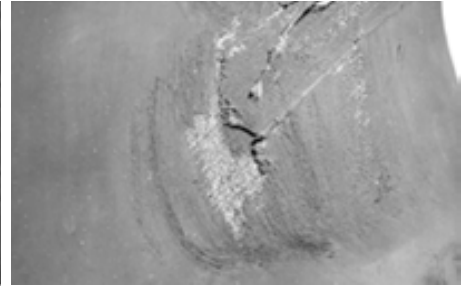

OVEREXTENSION

Cause of Failure:

The air spring is operated outside the maximum rebound range as a result of unrestrained (missing end stop) or excessive axle travel (defective/improperly adjusted height levelling system or wrong air spring). The abuse may result in separation of the bellows from upper or lower mounting parts.

Recommendation:

Check and/or adjust height levelling system, shocks, end stops and air spring specifications to prevent air spring travel of exceeding the max. recommended height.

ABRASION

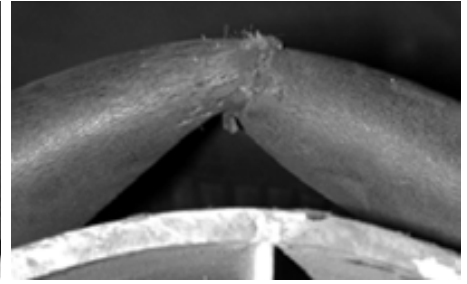

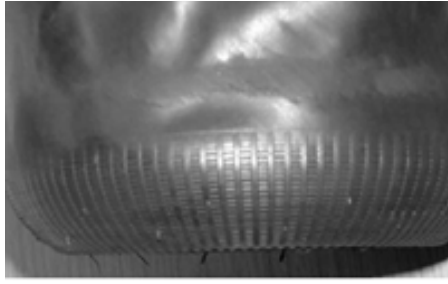

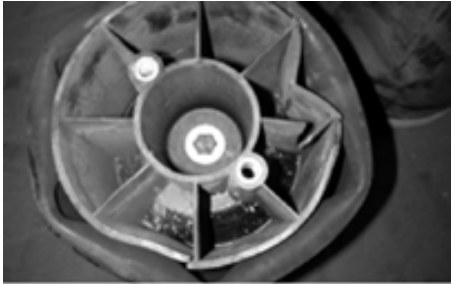

Cause of Failure:

Bellows in contact with other components (e.g. defective parts) of the vehicle or foreign objects (e.g. dirt, rocks) that accumulate at the piston/ rolling part of the bellows. They may rub through the bellows during spring deflection.

Recommendation:

Avoid contact between bellows and any other part of the vehicle. Check air springs periodically / remove foreign objects from rolling part of bellows. (Warning: Do not use solvents for washing)

Failure Causes and Prevention

OVERLOAD

Cause of Failure:

When overloading the vehicle the height levelling valve will open to adjust vehicle height by increasing the pressure inside the air spring up to max. system pressure available. The improper usage of the air spring system outside the recommended pressure range may cause deformation or damage to the bellows, piston and/or bead plate.

Recommendation:

Avoid overloading of the vehicle. Check air spring specifications for max. load capacity.

CONTAMINATION

Cause of Failure:

Air spring bellows are not resistant to solvents, hydraulic oils nor lubricants. A permanent exposure to chemicals will cause premature failure of air spring system.

Recommendation:

Check the air spring system periodically. Avoid too much oil in the air supply lines. Remove lubricants from the bellows. Do not use mineral oil based cleaners. Do not use any solvents.

LOW PRESSURE

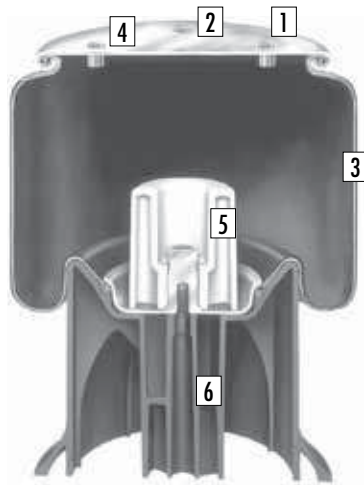

Cause of Premature Failure:

When operating the air spring system without internal air pressure, it prevents the bellows from rolling uniformly over the piston/girdle hoop, instead it may fold. Permanent operation without internal air pressure will increase wear of the bellows significantly.

Recommendation:

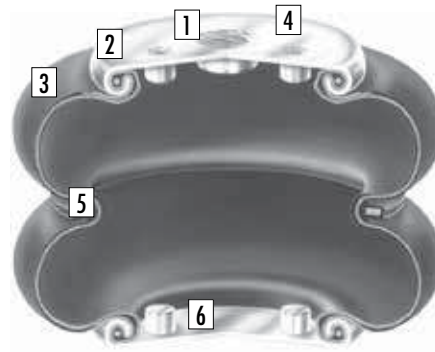

Avoid operating air spring system without internal air pressure. (Inflate air springs before driving) Check periodically the air supply lines for leaks. Examine the bellows for development of folds.
