

40-FT INTERMODAL CONTAINER CHASSIS

SIZE - 40'

MODEL - Gooseneck

RELIABLE CHASSIS SOLUTION

Stoughton®, your choice for dependable, tough chassis, provides intermodal solutions for your applications.

Our engineering expertise and precision manufacturing allows us to produce the highest quality and most dependable chassis.

BUILT TO BE BETTER

Stoughton is the first chassis manufacturer to offer a fully galvanized frame as standard.

GALVANIZATION IMPROVES ROI

The galvanized chassis improves your return on investment because the chassis:

- Requires less maintenance.
- Has a longer frame life, typically lasting 30 to 50 years versus the 15 to 25 years of a painted chassis.
- Eliminates the need for paint refurbishment, which can increase cost and take the chassis out of service for up to 4 weeks.
- Has a higher resale value

In addition to longer life and reduced maintenance, the galvanized chassis product creates noticeable increases in production sustainability with fewer

negative impacts on the environment. Compared to painting steel components, galvanizing reduces reported Volatile Organic Carbon (VOC) emissions by 16 pounds per unit. The galvanized chassis reduces reported hazardous waste (HW) generation by 8.6 pounds per unit, which allows for a higher recyclability of the chassis frame.

GALVANIZED STEEL IS RECYCLABLE

Hot-dip galvanized steel is made from two naturally occurring, abundant elements – zinc and iron ore – the base element of steel, are infinitely recyclable without the loss of any physical or chemical properties. The 100% recyclability of hot-dip galvanized steel is a great benefit to minimizing environmental impact. Rather than being downcycled into other products, reclaimed zinc and steel are often put right back into use.

40-FT GOOSENECK INTERMODAL CONTAINER CHASSIS

DURABILITY

American made and engineered durability from the ground up. With over 30 years of experience in engineering and manufacturing chassis, we know how to build to last.

QUALITY BUILT

Everything we do ensures the highest quality chassis products. Stoughton is ISO 9001:2015 quality management system certified for the production of painted intermodal chassis in our Evansville facility.

TECHNOLOGY BUILT IN

Drawing upon our 60 plus years of trailer manufacturing experience, we are forging ahead into the 4th revolution of manufacturing with our investment into Smart technology and automation. This technology ultimately leads to new advanced designs.

We are dedicated to providing a reliable and profitable solution for you. We build and design chassis to handle demanding transportation needs, while paying close attention to the details.

This is why at Stoughton
