# MULTI-TEMPERATURE REFRIGERATED TRAILERS

## WHAT WE OFFER

Stoughton Trailers is proud to announce that PureBlue refrigerated trailers are now available with multi-temperature capabilities. Your refrigerated trailer can be customized to manage multiple temperature zones within the trailers. Multiple temperature zones allow fresh and frozen loads to be hauled together, giving your fleet greater flexibility and efficiency.

PureBlue trailers come standard with many galvanized steel components to improve corrosion protection. Galvanized components include the front coupler, rear frame, landing gear frame and rear impact guard.

Available options include roll-up rear door and stainless steel rear frame.

The optional pickup lip protects the coupler from damage during the tractor trailer connection process.

PureBlue offers a heavy duty grocery spec flat floor. Options shown: rear threshold plates, corrugated aluminum scuff, and 2 rows of logistics track.

Stoughton refrigerated trailers are proudly made in our Evansville, WI facility.

Please contact your Stoughton Dealer or Sales Representative for additional information.
