

STOUGHTON[®]

Technology to Automatically Connect
your Air, 7-Way Electrical and
Communication Lines in 7 Seconds

GET CONNECTED
NOW

As the industry moves to adopt increased levels of vehicle automation, Stoughton Trailers is anticipating this need by outfitting its dry van trailers to be compatible with Auto Connect™.

By partnering with Electrans Technologies, a Canadian company who has designed the patent-pending auto coupler solution, Auto Connect automatically connects the air, 7-way electrical and communication lines from the truck to the Stoughton dry van trailer. With Auto Connect, drivers will no longer need to step out of the truck. With a push of a button in the cab, Auto Connect couples the pneumatic airlines, electrical lines and the CAN bus or other communication wiring

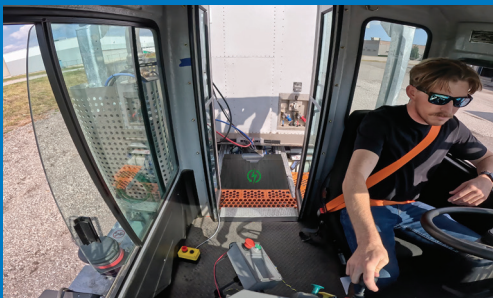

required to operate a wide variety of sensors and cameras. In just 7 seconds, all lines are securely connected and fully operational with signals flowing freely in both directions through the Auto Connect system.

GET CONNECTED **NOW**

An upgraded, patent-pending coupler on Stoughton dry van trailers is designed to accommodate the new Auto Connect™ system. A slot on the front bolster is specifically designed to house the Auto Connect receiver and protect the receiver from damage. It comes complete with 2 airline fittings and an electrical harness to allow for easy connection. The receiver can be installed, connected and ready

for use in as little as an hour on new trailers with the optional Auto Connect coupler. Stoughton dry van trailers outfitted for this feature will be backwards compatible, allowing you to couple tractors and yard equipment with the legacy connections. Being backwards compatible provides you the flexibility to manage your truck and trailer fleets as you adapt to this new technology.

By choosing Stoughton dry van trailers, your trailer fleet will be ready for this latest wave of technology.

Imagine your driver simply backing up, pushing a button within the cab and 7 seconds later driving away with the trailer. This is the near future - make sure your trailers are ready to adopt this technology. Choose Stoughton to GET CONNECTED NOW.
